

Press Release

CDI Electronics Upgrades MEDS Diagnostic Software to include BRP Engines

February 15, 2010

CDI Electronics, the premier supplier of replacement outboard ignition components has released a new version of its **Marine Engine Diagnostic Software ("MEDS")** to include BRP engines. MEDS 4.0 now includes the capability to diagnose BRP's lineup of electronically controlled two-stroke and four-stroke engines, including FICHT, E-TEC and Johnson Four-Stroke models. MEDS already provides engine diagnostics for Mercury, Mercruiser and Yamaha engines.

Thomas James, CDI sales manager explained: "With Release 4.0, MEDS now provides the independent marine technician with the capability to diagnose over 90% of the electronically controlled outboard engines on the water today. Its easy-to-learn user interface facilitates the reading of all kinds of engine data, thereby eliminating the guess work in diagnosis and repair. Now that repair work has become a larger portion of dealer revenue, MEDS 4.0 greatly increases the population of serviceable engines for all repair shops."

To learn more about MEDS 4.0, simply call your regional distributor of CDI components, the CDI Tech Support Line at 866-423-4832, or visit the CDI website at www.cdielectronics.com.
